* Sample Business Requirements Documents Template=

• Problem: The agri expert of our district everytime came & see our crop & then give the prescription of pesticides. Always he needs to travel alot. For making this job easier we need to make an application or website through which people share the picture of crop & he it will make his job easier.

1) Executive Summary Snapshot :=

- Research has shown that we need to develop an application or website for farmers and agri experts.

- This research data indicates that there are so many farms in a district & agri experts are in limited numbers. So we need to make our application on big scale.

- The scope of the proposed project is in a large number in villages.

- The main business drivers behind the effort are agri experts.

- The current process only allows us to make application in one district occasionly, the proposed process allows us to make application in all district.
2) Project Description =

- While the current process only allows us to make application for one district, the proposed process allows us to make application for many district.

- The goal of making an application for many district presents the following challenges such as. we need to take data of farmers on big scale.
    we need big team for survey.

- Why we need to take this project ?
    - It will help make farmers as well as agri experts life easy.
    - In our country, farmers number are large by solving there problem we will get more profit as well as our company become famous in common people.

3) Project Scope =

- Project special Goals = We need to reach out to farmers & agri experts by doing our best and give them our best product.

- Tasks = Our task is that we will make an user friendly app which common people can use without any difficulty.

The apps features are the people/farmers are able to upload the crop picture with there name, location etc through which agri expert analyis it and give them pesticides based on crop condition.

-- We need to discuss with our team and then deliver the work between team members.

- Costs = Approximately we need 50,000 for make single app, in which we need to pay our teammember, there are some legal fees & taxes also associated and our companies ultimate goal is to make profit so we will need to look on that also.

- Deadlines - We need to give some deadlines by discussing with team member in which we will give our final product (application) . Such as, we will provide you app in 6 months.
